Subject:	dnsmasq custom ipv6 mtu advertising		

Description

As we can read in this thread [0] dnsmasq doesn't permit to specify a custom mtu for ipv6, this is needed on our setup to avoid batman-adv level fragmentation, the actual dnsmasq approach doesn't work in our setup because it requires to put a lower mtu on specified interface and we cannot (and don't want to do this)

Gui can you ask to dnsmasq developer to add this option (radvd already have it) so dnsmasq can work good also on our setup ?
