<b>Subject:</b>	Easy Internet Sharing		
<b>Description</b>			
At moment if we wanna that router share his attached Internet connection we have to manually edit configuration, it should be possible to have some degree of auto-configuration also also for this, moreover we should do it in way that make easy for the connection owner to give priority to his traffic maybe using <a href="http://wiki.openwrt.org/doc/uci/qos">http://wiki.openwrt.org/doc/uci/qos</a> as backend
